Energy saving tips for a warmer home and lower bills

Reduce your combi boiler flow temperature to 60C

Lowering the flow temperature will keep your home warm whilst cutting your bills.

Find and fix draughts around the home

Have a good look for gaps around windows, doors, pipes and floors.

Turn radiators down, not off, in rooms you're not using

Lowering the settings in rooms you're not using can save energy and help your boiler run more efficiently.
